

2.1 Cycling of Matter in Ecosystems

Organic substances contain C and H atoms mainly. Proteins, sugars, fats and other chemicals in your body are all organic chemicals.

Inorganic substances - matter that doesn't contain C and H atoms.

Cycling of Organic Matter

There is no "matter factory" so to maintain life matter must be recycled.

Food is organic and it helps to replace organic matter lost as waste.

Matter is also recycled through decay. Decomposers like bacteria, fungi break organic materials down to inorganic materials.
