

- to restore balance in ecosystems, species are being reintroduced to their natural habitat
- endangered species are captured for breeding

P. 19 1-4

- biodiversity is greater in ecotones
- an **ecotone** is the area between ecosystems. Ex. forest/grassland

Oct 20-1:08 PM

- ecotones usually provide food and cover (shelter) so there are more species in these areas.

Oct 24-2:58 PM
